ELECTION-SIMULATOR-TM

TV ELECTION PORTAL – Interactive Broadcast Platform for Live Election Results

CONCEIVED, DESIGNED & DEVELOPED BY TM COMPANY – THEJAN THAMMAHETTI

OPEN LIVE PLATFORM →

OFFICIAL PROJECT PRESENTATION

ELECTION-SIMULATOR-TM (v2.0) is an advanced interactive platform created by **TM COMPANY – Thejan Thammahetti**. It bridges electoral data management with professional television-style presentation, offering a complete digital suite for simulating, tracking, and broadcasting live election counts.

The platform allows users to configure candidates, political parties, districts, and polling stations, track real-time vote counting, and progressively publish election results through dynamic dashboards, interactive maps, and 3D cinematic visual graphics.

KEY FEATURES & SYSTEM ARCHITECTURE

1. ELECTION SETUP & CONFIG

- Complete custom setup for election consults.
- Add candidates, parties, logos, photos, and colors.
- Flexible configuration of districts and precincts.

2. LIVE COUNT MANAGEMENT

- Real-time data entry per electoral district.
- Track voter turnout, total voters, and progress.
- Synchronized data publishing at set intervals.

3. BROADCAST DASHBOARD

- National leaderboard & real-time candidate rankings.
- Automatic leader projection and seat allocation.
- Live progress status for counted voting stations.

4. INTERACTIVE ELECTION MAP

- Dynamic geographical visualization of territories.
- Automatic region coloring based on winning candidate.

5. TV CONTROL & 3D VISUALS

- Cinematic animations for winner announcements.
- 3D visual effects, dynamic podiums, and transitions.
- Broadcast closing sequence upon final count.

6. ARCHIVE & COMPARATOR

- Complete historical database of finished elections.
- Comparative analysis module between past votes.
- Full data backup export and import via JSON.

7. BROADCAST CONTROL ROOM

- Control panel for managing live transmission states.
- Operational parameter control & graphic timing.

DATA ARCHITECTURE

- Client-side browser storage via LocalStorage.
- Zero external server dependencies required.

TECHNOLOGY STACK & FRAMEWORKS

TECHNOLOGY	APPLICATION ROLE & USAGE
HTML5 & CSS3	Semantic document structure and core visual styling.
JavaScript / Vue.js 3	Reactive user interface state management and data binding.
Tailwind CSS	Enterprise-grade layout design and responsive styling system.
Chart.js	Data visualization, statistical charts, and live percentage graphics.
Three.js & GSAP	3D broadcast environment rendering and fluid cinematic animations.
